

SAP BAIP: AN AGENT NETWORK FOR THE €600M SYNERGY TARGET

Fastweb + Vodafone Italia Post-Merger Synergy Acceleration

Do you remember the first time you held
one of these?

What did you really need from your first phone?

What did you really need from your first phone?

**To call. To be
reachable. To
connect.**

**The need never
changed.
Everything else
did.**

Agenda

01

The Challenge

Who you are, the mandate, and the three blockers standing in the way.

02

The Solution

SAP BAIP in action: two real agents, two real problems solved.

03

The Value

What you already own, why SAP, and why waiting costs more than starting.

Fastweb Today

Italy's #2 telco just doubled in size overnight.

#2

telco in Italy, part of Swisscom Group

€600M

in annual synergies

Jan 1, 2026

merger with Vodafone Italia effective

2029

the deadline

Strong foundations. The architecture is already in place.

The Ambitions

01

Automate at scale

2× volumes. Zero additional headcount needed.

02

Cut cost, protect revenue

Free people for what grows the business

03

Innovate under control

AI everywhere. Shadow IT nowhere.

The Challenges

01

Scale or Fall Behind

Processes still manual. People stuck on repetitive work.

02

Cost Explosion

€1.2M / year lost to manual work

03

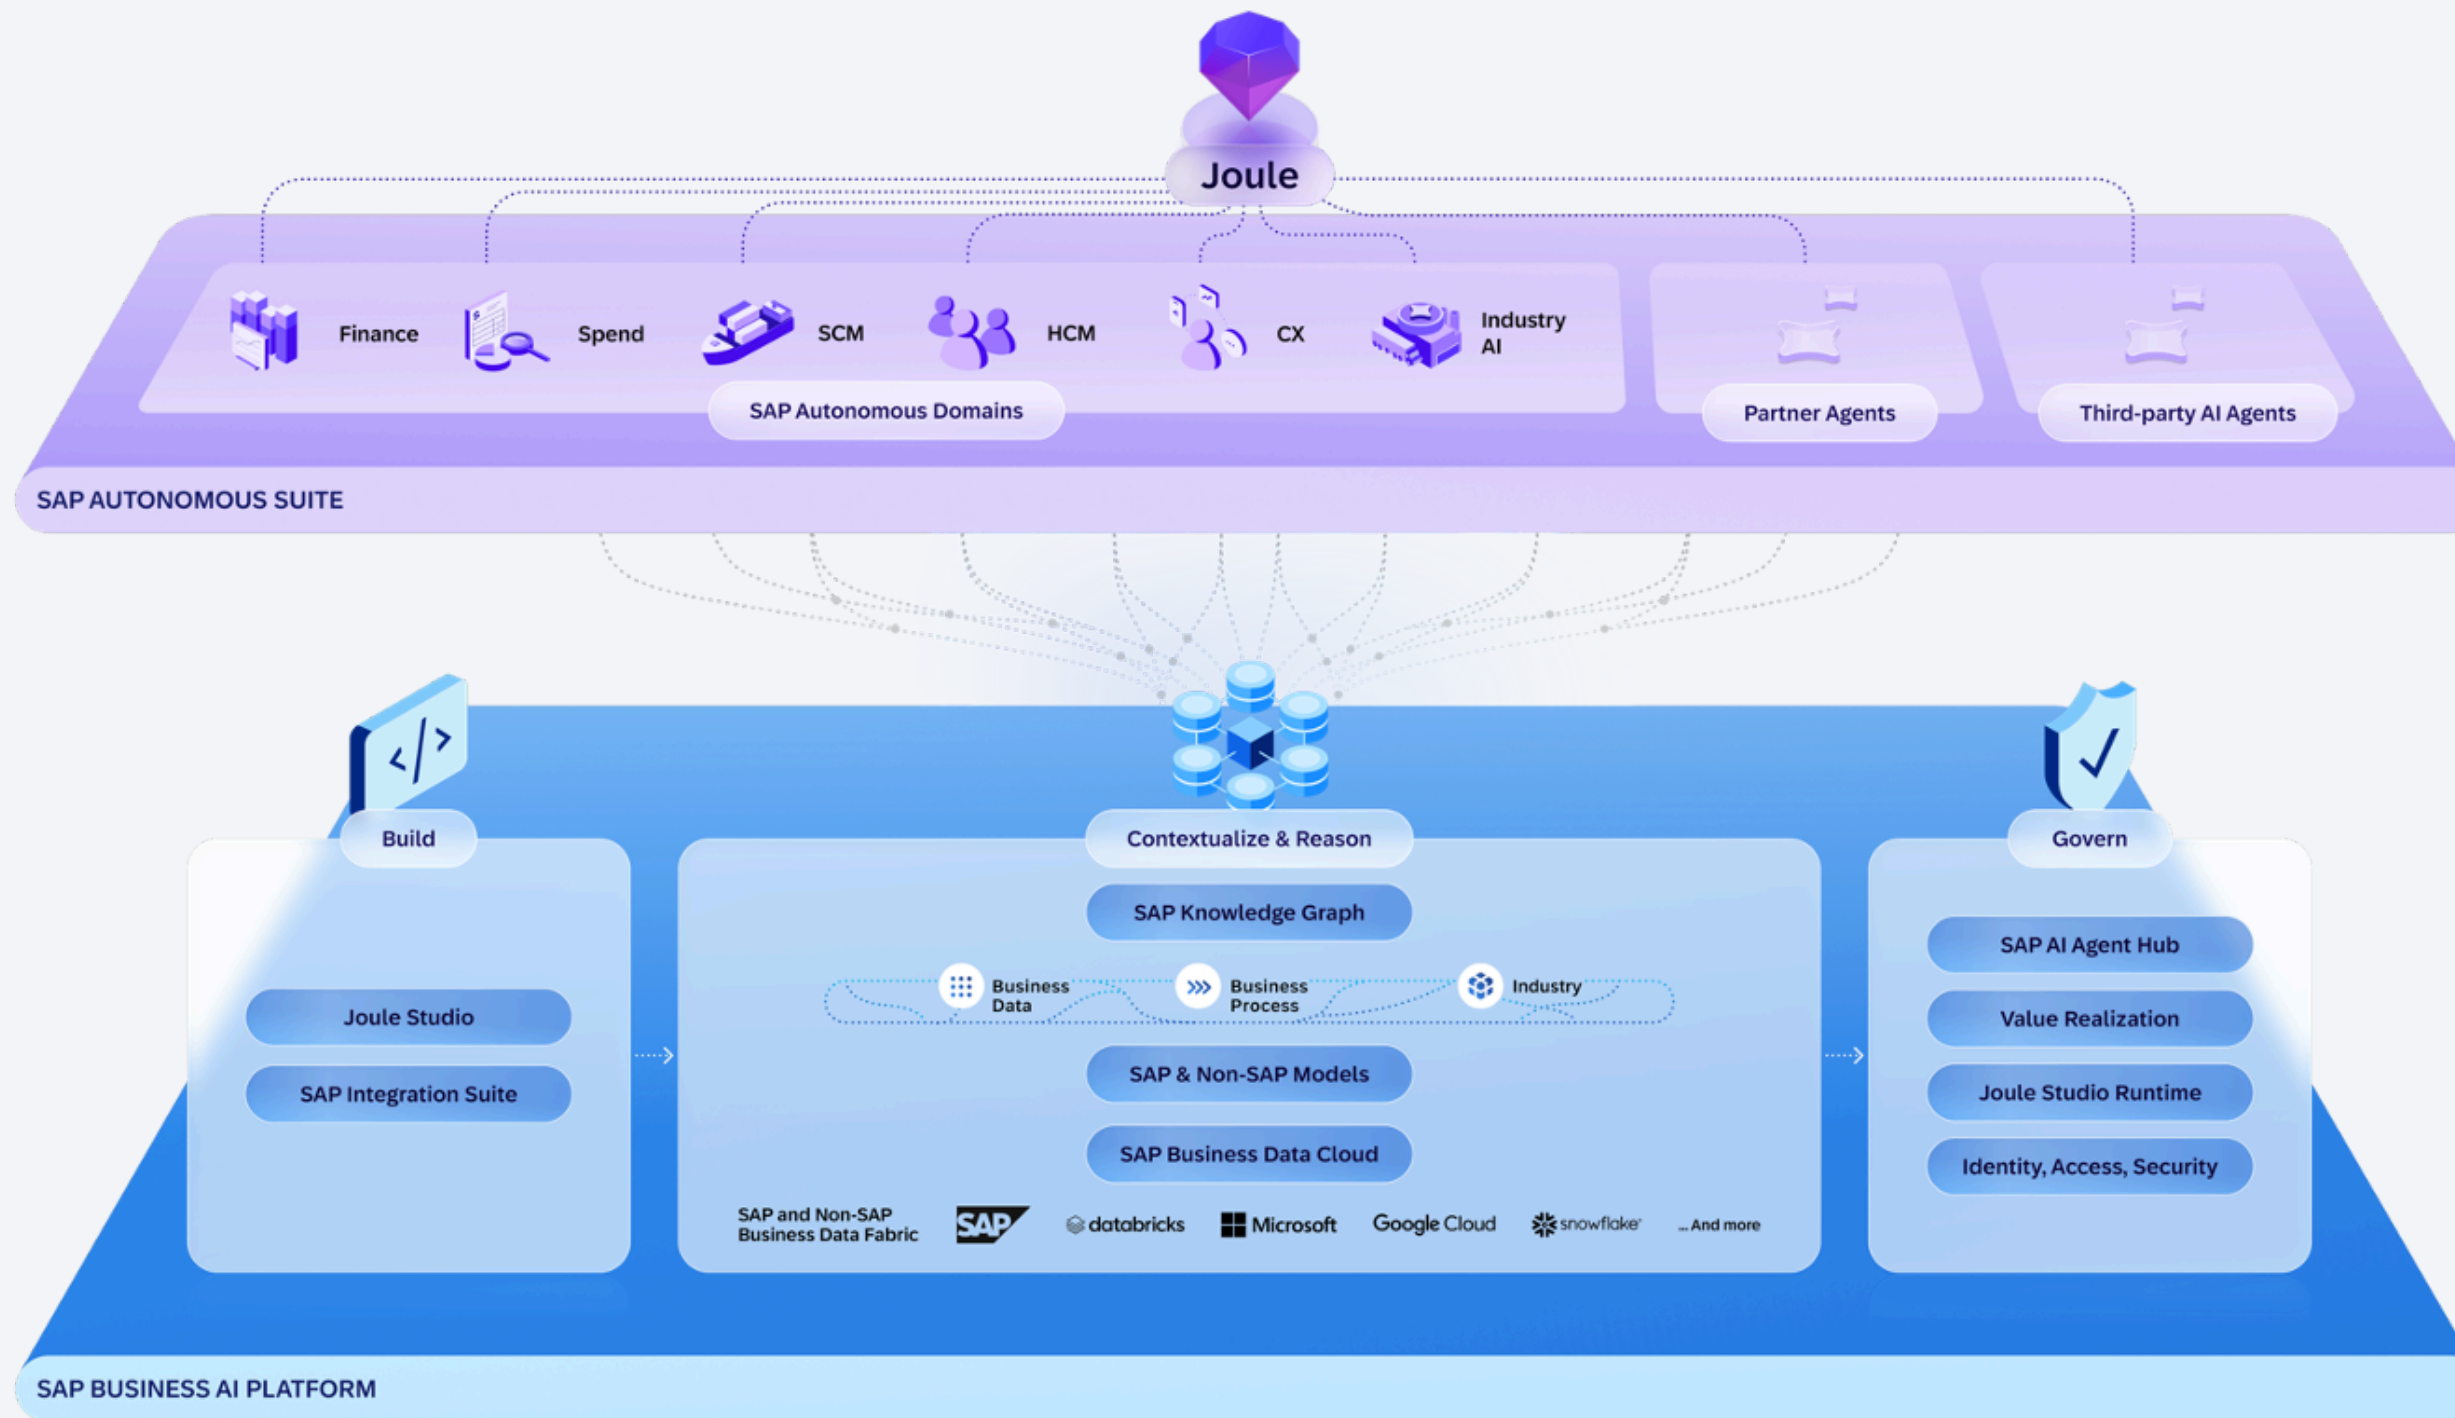

AI Governance at Risk

Shadow IT by default

€600M won't be reached by hand.

The Autonomous Enterprise

Same call. New world.

The Autonomous Enterprise.

Alex

Finance Operations Specialist

Every day Alex resolves vendor invoice queries across Salesforce and S/4HANA manually,
ticket by ticket.

15 tickets/day

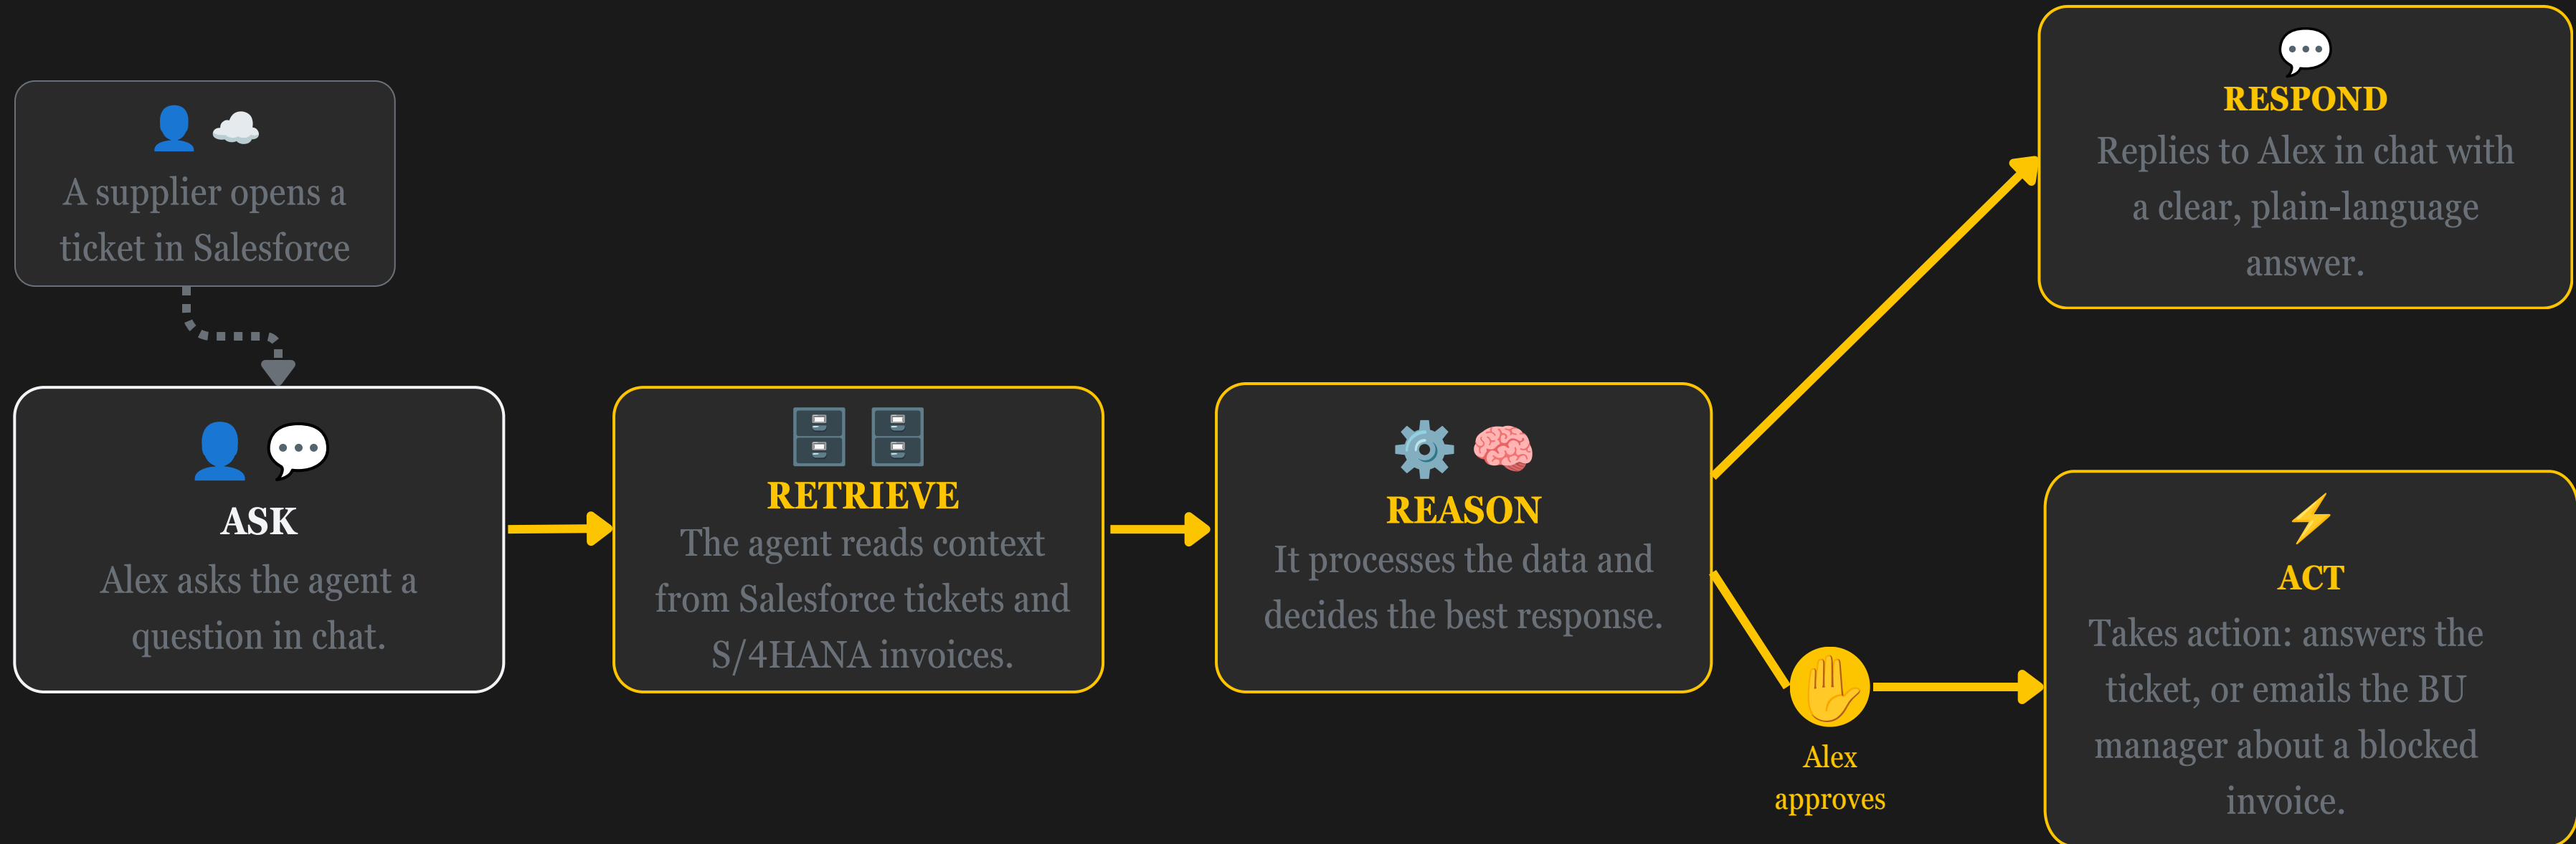

15 min each

×2 post-merger
volumes

One example, surfaced in discovery. The entry point, not the endpoint.

How the Invoice Resolution Agent works

From a question in chat to a resolved ticket: one governed flow

Alex stays in control. Every action is proposed, then approved.

Demo 1 — Custom Invoice Agent

Under the Hood

Every component runs on the SAP platform you already have

USER LAYER

SAP BTP

Chat Interface

Alex's workspace

Fiori Ticket View

Demo view, simulates the client's ticket system

DEMO

AGENT LAYER

SAP BTP

Invoice Resolution Agent

Reasons, plans, Human-in-the-Loop on write actions

SAP AI CORE

AI Model

The reasoning engine

DATA LAYER

SAP BTP

Your Data

Live business data, read in real time.

Projected Outcomes

01

03

15min → 30s

per ticket resolution

80%

no-touch resolution

3×

volume capacity, zero marginal cost

"Alex didn't lose control. He gained leverage. The agent proposes. Alex decides. That's governed automation."

**The smartphone
was already
in your hand.**

You just saw it run. Twice.

Same platform. Two agents. Two problems solved.

The proof is already running

Global fashion retailer. 1,000+ stores, 50+ countries. Custom agent + standard agent, both in production.

LC Waikiki

Challenge

Two teams (Procurement and HR) drowning in manual queries across disconnected SAP systems. No way to scale without adding headcount.

10 min → 3 sec

per procurement query

+70%

operational efficiency, Procurement

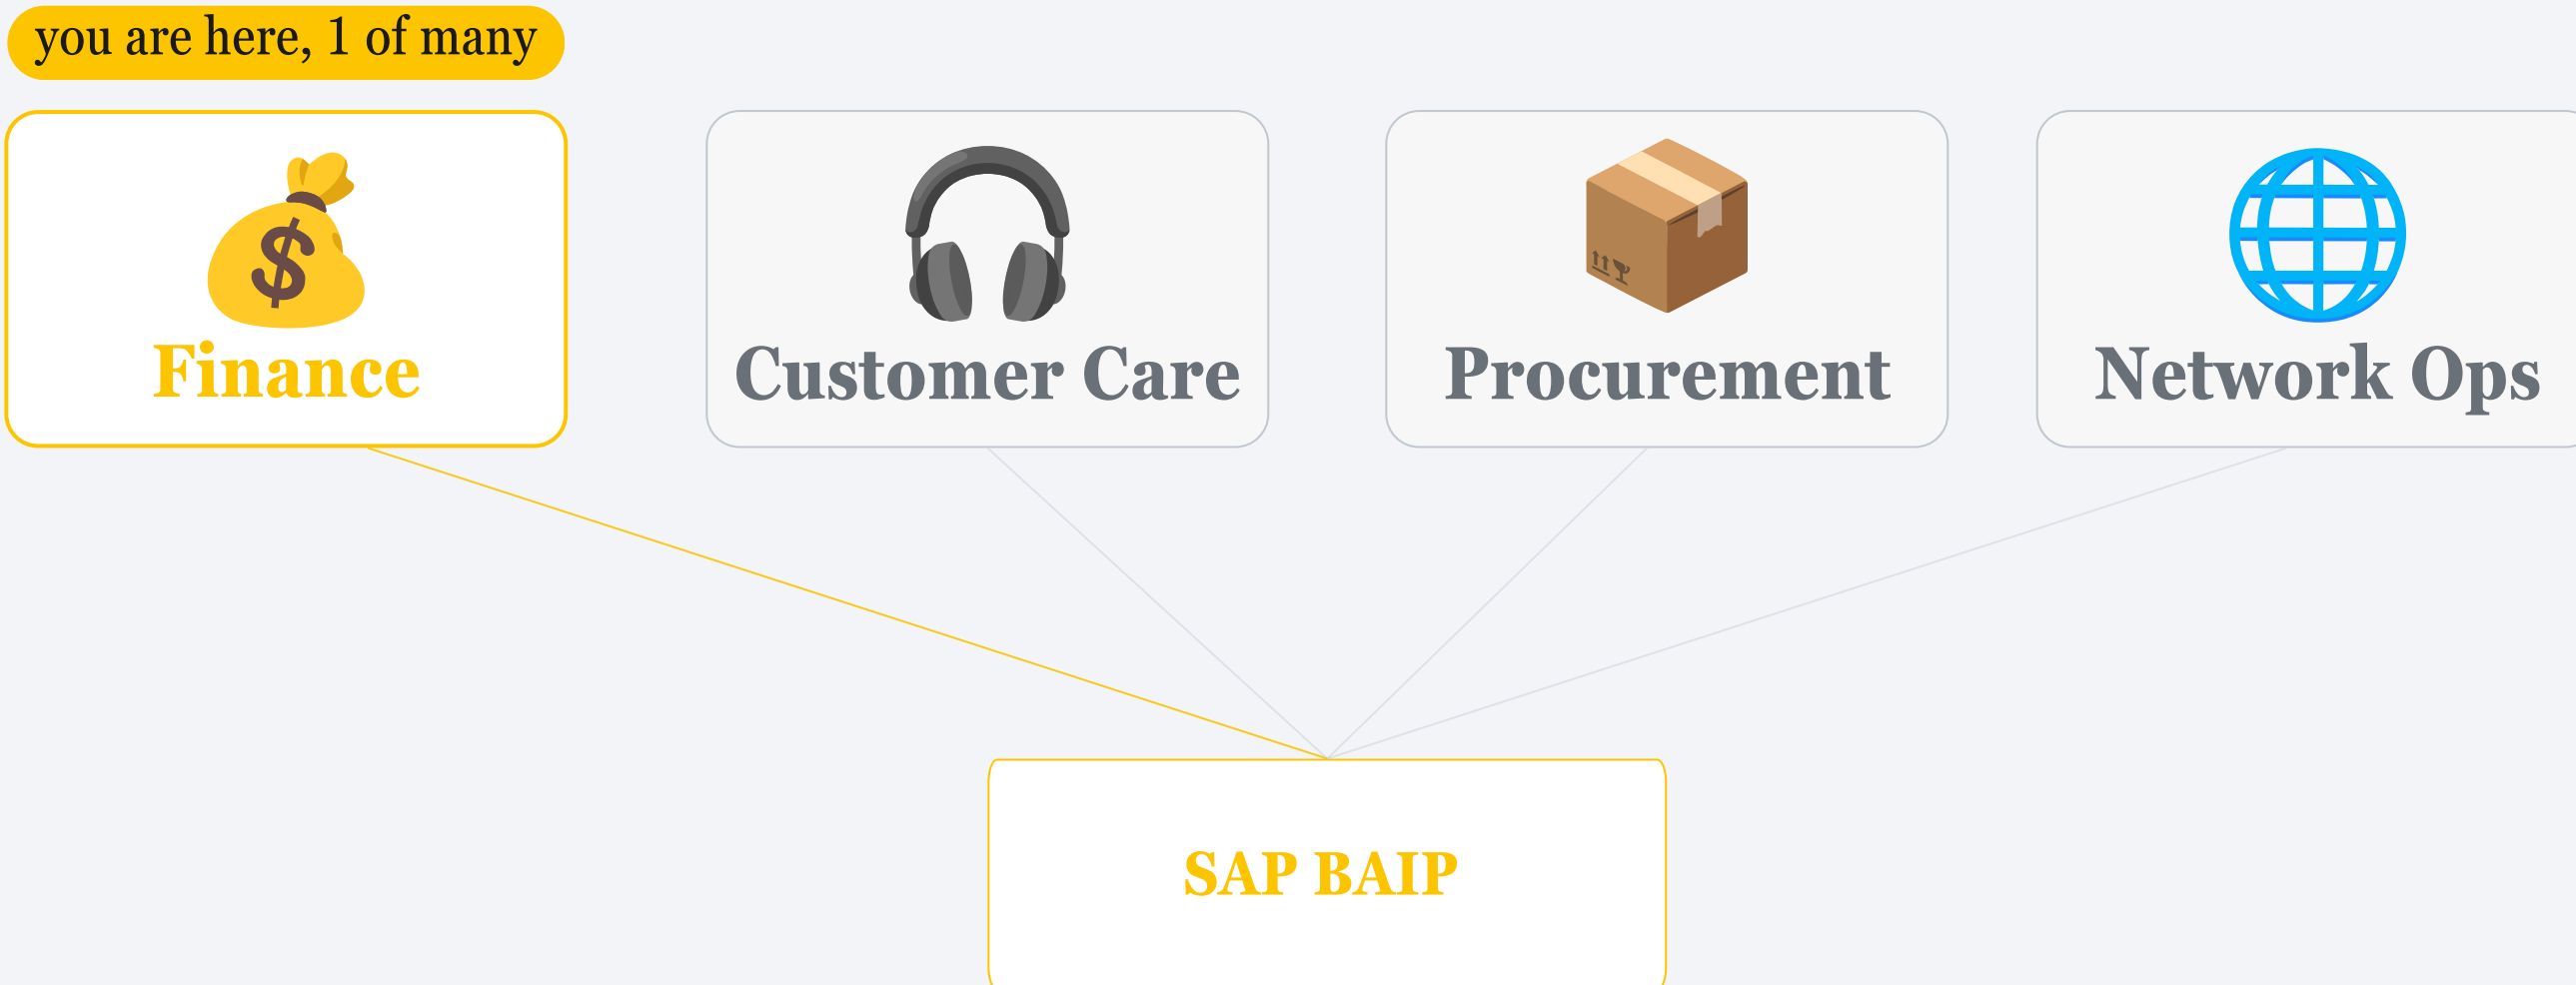

-40%

HR Process cycle

Same two-layer pattern: one custom agent, one standard agent, same SAP platform.

You just saw two agents. Finance is one area.

Custom agents for your unique processes. Standard agents from the catalog. Both on the same platform.

Every process automated protects Opex synergies and frees people for revenue: cross-sell, faster care, lower churn.

**How much
does it cost?**

You already own it

The platform is funded. The credits are available. The decision is timing.

€453K

in BTP credits available in the current cycle, already funded

49%

Monthly BTPEA run rate. Over half the pre-bought capacity unused.

30,000

AI Units purchased July 2025. Zero activated across all live systems.

The first agent runs on budget already committed. This is not a decision about spend. It is a decision about when.

Why SAP

Proven at scale

80% of the top 100 global telcos already run on SAP.

Governed by design

Agents grounded in your S/4HANA data. Full audit trail, no external tool matches this.

No migration needed

BTP is already live in your landscape. No competitor starts from here.

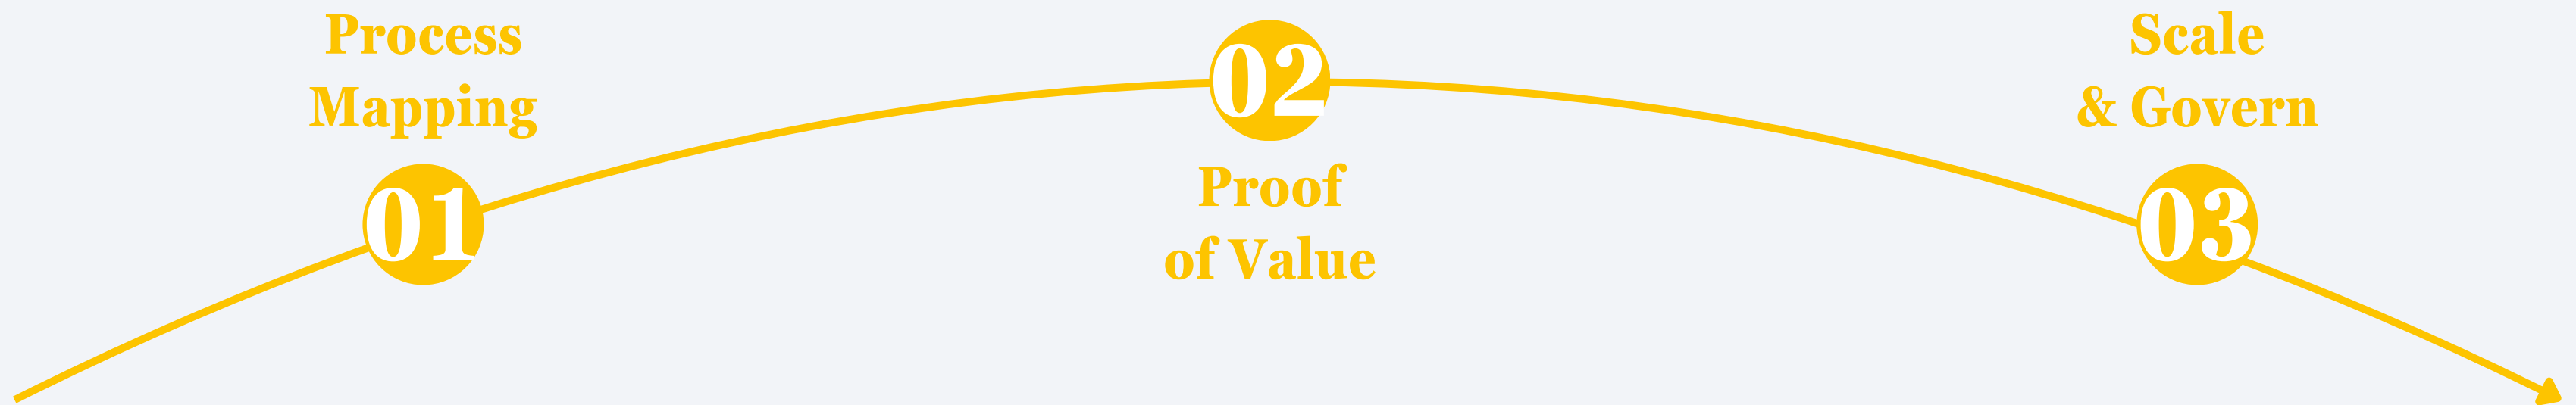

Waiting is the most expensive option

Every quarter of delay is synergies you never recover.

AI demand is already here. Without governance, it becomes Shadow IT.

Two agents. Two problems. Both funded. The only variable is when you start.

Next Steps

Not if, but how fast.

Thank you

Q & A
